What can Chiropractic do for your child?

Dr. Moses addresses parents questions as to why chiropractic care is important to children.

"I have adjusted many children, including my own children. I myself have been getting adjusted since a very young age by my father, who is also a Doctor of Chiropractic. As your child begins to participate in regular childhood activities like, baseball, football, hockey or dance, spinal misalignments (subluxations) may occur. If neglected, the injuries during this period of rapid growth may lead to more serious problems later in life. Subtle traumas in childhood (which may or may not cause immediate pain or symptoms) will affect the future development of the spine leading to impaired nervous system functions"

More and more parents are seeking Chiropractic care for their children because they understand that many spinal problems that occur in adults began as early as birth. Even natural birthing methods can stress an infants spine and developing nerve system. The resulting irritation to the nerve system, caused by spinal and cranial misalignment, can be the cause of many newborn health complaints, such as colic, breathing problems, sleep disturbances, allergic reactions, and even sudden infant death syndrome.

Since significant spinal trauma can occur at birth, many parents have their newborns checked right away. As the infant grows, learning to hold up the head, sit, crawl and walk are all activities that affect spinal alignment and are important times to have a child checked by a Doctor of Chiropractic.

A cavity in a tooth can sometimes take a long time before you feel any pain or discomfort. However if regular dental exams are scheduled the cavity can be repaired before it gets to the point of pain.

The same is true with Chiropractic. Spinal checkups can identify subluxations and when corrected early in life, will help avoid many health complaints seen later in teens and adults.

To enhance your child's ability to function in a greater state of health, make an appointment today to have your child's spine examined.

Mention this Newsletter and receive your child's examination at NO CHARGE.
